Comments

(Set forth by above question #, if applicable.  
Use "Additional Comments" Sheet, if needed)

File #: 95-1027167

#1. The examiner chose to perform solubility tests on the K fibers. Infrared analysis was available at this time and is a much more specific analysis and allows for the determination of the polymer sub-class of a synthetic fiber. Infrared analysis should have been performed on beige and gray K and Q fibers.

#2. The results are not adequately documented in the notes. The notes are not dated and are in pencil. The technician did not initial the notes. The spectra for the beige known fiber is marked "K1" and should be "K2". The hair was deemed unsuitable for comparison with no documented reason or explanation.
